

### JS Code:

```
const fs = require('fs');

// Read file asynchronously
fs.readFile('news.txt', 'utf8', (err, data) => {
  if (err) {
    console.error('Error reading file:', err);
    return;
  }

  console.log('Paragraph from file:\n', data);
});
```

### TXT file about this week's Weather:

Toronto anticipates a potential record-breaking warm day this Friday, with unseasonably mild temperatures persisting. Today, the city expects a high of 7°C, falling short of the 1990 record of 9°C. However, Environment Canada forecasts an impressive 12°C on Friday, surpassing the previous high of 10.6°C set in 1938. Typically, February 9 witnesses a high of -1.8°C and a low of -10.4°C in Toronto. This winter has been unusually warm, marked by minimal snowfall. The current weather features a mix of sun and clouds, with showers expected tonight and an overnight low of 6°C. Despite a previous fog advisory, the city is now clear. Saturday will be cooler but still mild at 7°C, followed by a mix of sun and cloud and a high of 3°C on Sunday.

### Screenshot of my fs.readFile in my Node.js script, reading the TXT file and logging its content on console using console.log:.
